

All Consumers Deserve Clean Cannabis

VIST™ introduces the revolutionary new, safe CryoPasteurization™ technology to decontaminate cannabis flower and shake! Developed from years of experience in food and pharma, the VIST system delivers safety, consistent quality and positive decontamination without irradiation, oxidative ozone or hydrogen peroxide.

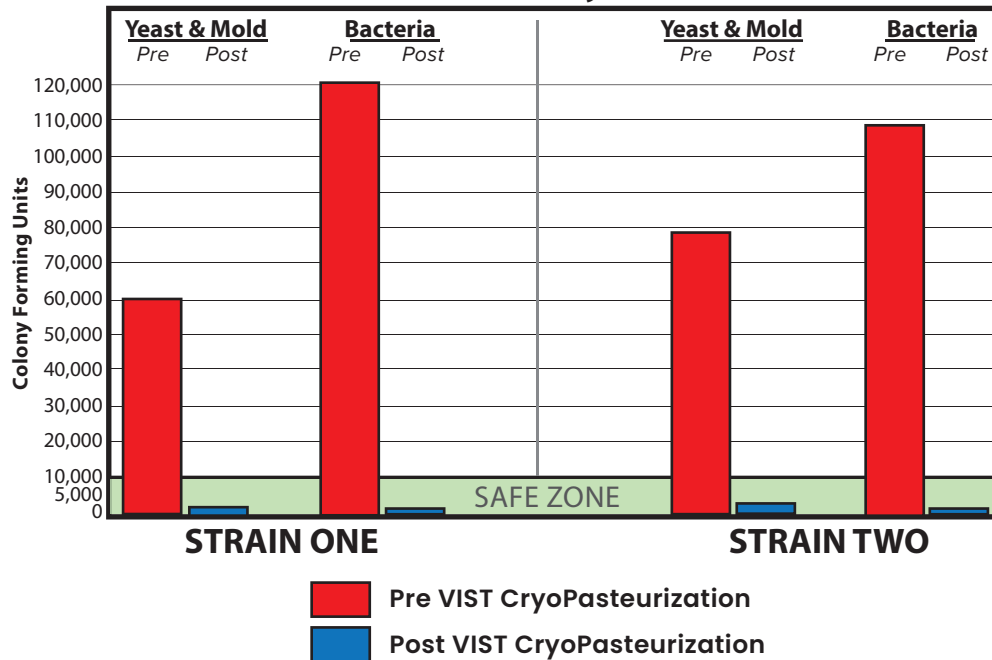

Never Irradiated!

The VIST CryoPasteurization™ System pasteurizes in a proprietary process without the use of harmful irradiation. The pharma-grade process delivers consistent results without destroying the organoleptic properties of the product (appearance, texture, aroma).

- * Reduces yeast, mold and bacteria to pasteurization levels
- * Preserves terpenes and cannabinoids
- * Provides process to meet state limits at high efficiency
- * Pass with confidence
